

## THIS STEPS USE TO PUSH LOCAL REPO TO REMOTE REPO(GITHUB).

Step1 : Go To git bash.

Step2 : git init(all command can be perform).

Step3 : git add -all (Use to add all folder and files to the master branch).

Step4: git commit(Store in hardisk to recall again).

Step5 : initial commit- commit name > esacp button > : >wq (for exit).

Step6: Connect the remote repo to local repo vscode. >exampe(`git remote add origin https://github.com/SUJALGPM/Donation.git`)

Step7: git push origin master (Project push to git repo).

New commands :-

```
Git status
Git add -all
Git commit -m "hello commit"
Git push origin master
```

If above push is not working then first access the origin in our local system.

```
git fetch origin
git merge origin/master
git push origin master
```
